

DeepL Product, Pricing, and Pricing-Page Evolution

What can be established with confidence

From January 2023 through July 2026, DeepL's public monetization evolved along four clear arcs.

First, the original **DeepL Pro** translator lineup at the start of 2023 was the familiar three-tier structure of **"Starter," "Advanced," and "Ultimate,"** plus a free tier and sales-led enterprise options. Contemporary public reporting that quoted DeepL's page described annual per-user pricing at **€7.49 / €24.99 / €49.99** and document-translation limits of **5 / 20 / 100 files per month**, with the same per-user pricing used for team subscriptions. DeepL's API remained separate, with **DeepL API Free** and **DeepL API Pro** sold on a usage model. ¹

Second, **DeepL Write** launched as a free beta on **January 17, 2023**, then **DeepL Write Pro** launched on **April 25, 2024** as a business-grade paid writing assistant. Over time, Write moved from being introduced as its own product to being packaged in combinations with Translator and then, by the current public pricing structure, to an explicit **"Write Pro add-on"** attached to Translator plans. DeepL's own help center now states that the current pricing page reflects a changed plan offering and that some earlier plans are no longer shown. ²

Third, **DeepL Voice** launched publicly on **November 13, 2024** with **Voice for Meetings** and **Voice for Conversations**, initially framed as new business products rather than a mature self-serve consumer plan family. By 2026, DeepL's help center and mobile-app purchase documentation show a mixed model: some Voice plans are sold publicly as **"Voice Starter"** and **"Voice Business"** in app stores, while **Voice for Conversations** can still be bought as a standalone sales-led plan and is also bundled into **"Voice for Meetings Business."** ³

Fourth, the current public lineup is no longer the old Starter/Advanced/Ultimate surface. Current public snippets for DeepL's web pricing page show **"Individual," "Team," and "Business"** for Translator, plus a **Write Pro add-on**. Current help-center tables explicitly bridge old and new naming by presenting pairs such as **"Starter / Individual"** and **"DeepL Pro Advanced / Team."** For API, current help documentation shows that **API Free** and **API Pro** are legacy purchase paths, while the current lineup is **Developer API, Growth API, and Enterprise API.** ⁴

A major caveat is methodological: I could establish most launches, plan names, prices, and feature gates from DeepL primary sources, indexed pricing snippets, help-center articles, app-store listings, and reputable press coverage. I could also identify at least one exact Wayback capture URL for **/en/pro** on **2023-10-25**. But in this browsing environment, I could not directly render enough archived pricing-page snapshots from the Wayback Machine to verify every structural change quarter by quarter from the archived HTML itself. Where exact first-appearance or disappearance dates depend on archive inspection, I present a bounded interval and mark it as uncertain. ⁵

Master chronological timeline

Date	Product	Event	Source
2023-01-17	DeepL Write	DeepL Write launches in beta as a free AI writing companion for English and German.	6
2023-01	Translator pricing baseline	Public pricing quoted as Starter €7.49, Advanced €24.99, Ultimate €49.99 per month on annual billing; tiers differed mainly by document volume and unlimited use.	7
2023-01	API baseline	DeepL API Free and DeepL API Pro are the public API offers; API Pro pricing was quoted as €4.99/month + €0.00002 per translated character .	8
2023-10-25	Pricing page evidence	An exact Wayback capture URL for https://www.deepl.com/en/pro exists for 2023-10-25 10:09:00 UTC ; this confirms /pro was an archived canonical pricing endpoint by late 2023.	9
2024-04-24	DeepL Write	DeepL publishes a product overview for DeepL Write Pro , positioning it as a secure AI writing assistant for business communication.	10
2024-04-25	DeepL Write	DeepL Write Pro officially launches.	11
2024-05-22	Company / product context	DeepL raises \$300 million; company press says Write Pro had launched in April 2024.	12
2024-07-17	Translator / API	DeepL announces its next-generation LLM for translation quality; later help docs show access to the next-generation model attached to paid API offerings.	13
2024-11-13	DeepL Voice	DeepL Voice launches with Voice for Meetings and Voice for Conversations .	14
2025-02-26	Pro experience	DeepL launches a new logged-in team/business Pro experience with redesigned navigation and admin tooling.	15
2025-03-04	Translator / enterprise features	DeepL launches Clarify , an interactive translation feature positioned for business customers.	16
2025-05-08	Pro experience	DeepL publishes a second article describing the newly redesigned Pro homepage , confirming the redesign had shipped.	17

Date	Product	Event	Source
2025-11 or earlier	API packaging	By the time PricingSaaS begins tracking DeepL in November 2025 , the publicly tracked API lineup includes Developer and Growth , implying the older API Free/API Pro public default had already been replaced.	18
2026-04-16	Voice / API	DeepL launches Voice-to-Voice and publicly announces DeepL Voice API and speech-to-speech products.	19
2026-07	Current public web pricing	Indexed snippets show current Translator pricing-page names as Individual , Team , and Business , with Write Pro add-on sold separately.	20
2026-07	Current public app-store pricing	DeepL's Germany App Store listing shows in-app purchases for Individual , Individual + Write , Voice Starter , and Voice Business , which confirms active self-serve mobile sales for those bundles.	21

Product-line evolution

Translator subscriptions

At the start of 2023, DeepL's paid translator product was publicly organized under **DeepL Pro** with three named tiers: **"Starter," "Advanced,"** and **"Ultimate."** Public reporting in January and February 2023 quoted annual-billing prices of **€7.49**, **€24.99**, and **€49.99** respectively, and described their main visible differences as unlimited-use privileges and the monthly number of document translations included. The same articles describe the free tier as allowing only a small number of document translations, and they say team accounts used the same per-user pricing. ⁷

DeepL's current help-center tables make the old-to-new renaming visible. File-limit and Microsoft add-in documentation now list the old and new names side by side as **"Starter / Individual," "DeepL Pro Advanced / Team,"** and then **"DeepL Pro Ultimate," "DeepL Pro Business,"** which strongly suggests an intermediate migration path rather than an overnight total rewrite of plan taxonomy. Those same tables preserve important gating details: document size limits differ sharply by tier, and add-ins keep daily character caps for lower tiers while higher tiers remain uncapped. ²²

By the current public web pricing surface, DeepL's indexed pricing snippet shows Translator sold as **"Individual," "Team,"** and **"Business."** The same current snippet still behaves like the old ladder in substance: the plan comparison surfaced in search results explicitly references the free version, then **Individual**, then **Team**, and the help docs continue to expose tier-based gating around glossary behavior, MSI install rights, network restrictions, and SSO support. ²³

Several feature gates are visible in DeepL's own support material. Glossary storage for **Starter / Individual** is personal-account based, while **Advanced / Team / Ultimate / Business / Enterprise** support broader glossary management. **SSO** is available only for team subscriptions with **50+ users**, and only on qualifying plans such as **DeepL Pro Advanced, Team, Ultimate, Business, Enterprise**, plus some Write and Voice team plans. **Network access restrictions** are currently limited to **Ultimate, Business, and Enterprise**. ²⁴

The exact public date when the web pricing page stopped leading with **Starter / Advanced / Ultimate** and started leading with **Individual / Team / Business** could not be pinned down precisely from directly inspectable archived pages in this session. What can be said safely is that the old names were still alive in DeepL's own February 2025 product communication and in current help tables, while current pricing snippets now foreground the new names. That puts the naming transition before July 2026 and likely during 2025, but the exact cutover on the public pricing page remains an archive-dependent gap. ²⁵

DeepL Write

DeepL Write first appears on **January 17, 2023** as a free beta product, launched publicly in English and German. DeepL's own launch post is clear that Write began as a separate AI writing tool, not as a paid Translator feature: it was introduced as a newly minted AI writing companion, free for anyone to use at launch. TechCrunch's same-day coverage confirms the launch date and the product's positioning as DeepL expanding from translation into writing assistance. ⁶

DeepL Write Pro launched on **April 25, 2024**. DeepL's press release and blog positioning both frame it as a business-grade writing assistant with stronger security and real-time suggestions for wording, style, and tone. That launch matters monetization-wise because it marks the shift from Write as a free standalone tool into Write as a sellable premium product. ²⁶

The packaging then appears to have gone through at least three phases. The first phase was **standalone free Write**. The second phase, after Write Pro launched, seems to have included a **standalone Write Pro / business-writing identity** and public bundle combinations with Translator. Evidence for the bundle era survives in present-day artifacts: DeepL's app-store help article currently offers **"Individual + Write Pro"** as an in-app purchase, and live web search snippets for the current pricing page still distinguish Translator plans from a separate **Write Pro add-on**. In addition, multiple DeepL support articles still name **"DeepL Write Pro"** as a qualifying plan in its own right for features such as SSO and style rules, which is what you would expect after an earlier standalone phase. ²⁷

The third phase is the current one: DeepL's help center now says explicitly that **"The Write Pro add-on can be added to any Translator plan that does not already include it."** The current public pricing snippet is equally explicit: **"Get more out of DeepL with an add-on. Annual. Write Pro add-on. \$7.49 per user/month (billed annually)."** That is the clearest public evidence that Write is now treated, on the web pricing page, as an add-on rather than the main axis of the plan grid. ²⁸

What cannot be pinned down exactly from directly inspectable archive snapshots here is the first date when named Translator bundles such as **"DeepL Pro Advanced + Write Pro"** appeared on the web pricing page, or the first date when they disappeared in favor of a generic add-on block. Present-day evidence proves those bundle names existed in public sales channels and customer-facing documentation, but the exact web-page switchover date remains uncertain without direct Wayback inspection. ²⁹

DeepL Voice

DeepL's voice line formally launched on **November 13, 2024**, when DeepL announced **DeepL Voice** and its first two products: **Voice for Meetings** and **Voice for Conversations**. DeepL's press release is the primary source for that date, and TechCrunch independently covered it the same day. The product at that point was speech-to-text translation in real time, aimed at multilingual meetings and in-person conversations. ³⁰

The launch-era sales model appears to have been business-oriented, not broad self-serve consumer pricing. Current DeepL help pages still show a partially sales-led shape: **Voice for Conversations** can be bought as a **stand-alone plan via Sales**, or accessed as part of “**DeepL Voice for Meetings Business**.” DeepL’s general plans page likewise says that standalone **Voice for Conversations** is available via Sales, while **Voice for Meetings Business** is available directly via the pricing page. That strongly implies an initial enterprise or sales-assisted phase, followed by a later move toward selective self-serve availability. ³¹

By the current period, the public naming has broadened. Help articles for Voice now list required plans including “**Voice for Meetings**,” “**Voice for Meetings Core**,” “**Voice for Meetings Business**,” “**Voice starter**,” and “**Voice Business**.” DeepL’s consumer-facing app-store documentation also says the mobile apps sell “**Voice Starter**” and “**Voice Business**.” In Germany’s App Store listing, those currently appear as in-app purchases at **€14.00 monthly / €143.99 annual for Voice Starter** and **€42.00 monthly / €429.99 annual for Voice Business**. Because those are app-store prices, they should be treated as mobile-IAP channel pricing, not automatically assumed to be identical to the web page. ³²

DeepL’s legal terms now expose important gating details for the current Voice family. The terms describe **Starter** as including **300 minutes per month per user, 50 online participants, and up to 10 participants for in-person group conversations**; **Business** includes **600 minutes per month per user, 300 online participants, and up to 30 participants for in-person group conversations**. Help documentation for Voice for Meetings separately confirms support for **Microsoft Teams, Google Meet, and Zoom**, and up to **300 participants** seeing translated captions. ³³

In **April 2026**, DeepL expanded the voice stack again with **Voice-to-Voice** and **Voice API**, moving beyond captioned speech translation into speech-to-speech and embedded enterprise workflows. TechCrunch described the launch as add-ons and early-access integrations for meetings and customer-service workflows, which suggests that even in 2026 parts of the voice portfolio were still being commercialized through staged rollout rather than a uniform public checkout flow. ³⁴

DeepL API

In early 2023, the public API lineup was still the familiar **DeepL API Free** and **DeepL API Pro** structure. DeepL’s Microsoft connector documentation, which reproduced DeepL’s own FAQ language, described **API Pro** as costing **€4.99 per month plus €0.00002 per translated character**, with **API Free** allowing up to **500,000 characters per month for free**. This is consistent with third-party developer documentation and 2023 ecosystem articles quoting DeepL’s help center. ³⁵

Current DeepL help documentation shows that this packaging materially changed. The current API article says the API is now sold through **Developer API**, **Growth API**, and **Enterprise API**, while **API Free** and **API Pro** “can no longer be purchased.” It also describes the new plan logic in detail: **Developer API** allows **1,000,000 characters in total**; **Growth API** includes a **fixed monthly or yearly price** with included usage, **50 million characters and 300 speech-to-text hours per month**, and charges overages above the included quota; **Enterprise API** is sales-led and based on committed usage. ³⁶

The current help article also shows how DeepL’s API monetization became more product-complete over time. Legacy **API Pro** now includes, in retrospective description, not just translation, but also **DeepL API for Write, speech-to-text translation**, access to the **next-generation language model**, and multiple admin/API-key management features. The same article says **Growth API** includes access to Write, speech-to-text,

next-generation model access, and cost-control tooling. That is a meaningful expansion from the 2023-era translation-first API packaging. ³⁷

As with the Translator renaming, the exact transition date from **API Free / API Pro** to **Developer / Growth / Enterprise** is not fully reconstructable from directly inspectable snapshots here. But it can be bounded. In the 2023-era public descriptions, the public API offer was still **Free / Pro**. By **November 2025**, PricingSaaS was already tracking **Developer**, **Growth**, and **Enterprise** as the live public API lineup, and current DeepL help pages treat **API Free** and **API Pro** as legacy products. The rename-and-repackage therefore happened sometime between those evidence points. ³⁸

Other launches that affected packaging

The biggest non-price packaging change in the period is DeepL's move toward featureized, business-grade upsells layered on top of core translation. In **July 2024**, DeepL announced a **next-generation LLM** for translation quality. In present-day support copy, access to the "next-generation language model" is tied to paid API tiers, showing how a model release became part of plan differentiation rather than just a silent backend improvement. ¹³

In **March 2025**, DeepL launched **Clarify**, which it described as a new interactive feature for business translations. DeepL's press copy framed it as personalization for the Language AI platform and as a response to demand from business customers. That matters for monetization because it reflects the company's shift toward value-added business controls and workflow features rather than only raw translation volume. ³⁹

By **2026**, DeepL was also publicly marketing **AI agents** and **Translation Flow** within the broader platform navigation and product messaging. These are not yet reconstructed here as clean public price lines in the same way as Translator, Write, Voice, and API, but they clearly affect how the pricing page is framed: the page is no longer just "buy translation volume," but "buy access to a larger language-workflow platform." ⁴⁰

Pricing snapshot tables

The tables below are not "every archived quarter" in the ideal Wayback sense; instead, they are the strongest dated public evidence points I could verify from accessible sources. Where a price or structural element could not be read directly, I mark it **not established** rather than inferring it.

Baseline snapshot at the start of 2023

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2023-01 to 2023-02	Translator	Starter / Advanced / Ultimate ; free tier; team accounts; enterprise by sales	Starter €7.49, Advanced €24.99, Ultimate €49.99 per month on annual billing	5 / 20 / 100 document translations per month; teams on same per-user price; free only a few documents	7
2023-01 to 2023-02	API	DeepL API Free / DeepL API Pro	API Pro €4.99/month + €0.00002 per character	API Free up to 500,000 characters/month	8
2023-01	Write	DeepL Write beta, free	Free	Separate writing tool, not yet a paid add-on	6
2023-01	Voice	Not yet launched	—	—	41

Snapshot around Write Pro launch

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2024-04-25	Write	DeepL Write Pro launches	Price not established from accessible primary pages in this session	Business-grade writing assistant with stronger privacy/security	42
2024-04 to 2024-05	Translator + Write	Bundled or combined packaging likely begins to matter commercially, but exact public bundle lineup on the pricing page is not fully established here	Not established	Current evidence later shows bundle-style names and then add-on logic	43

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2024-05	Company context	DeepL PR references Write Pro as a launched product	—	Confirms Write has become part of monetized business platform	44

Snapshot around Voice launch

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2024-11-13	Voice	Voice for Meetings / Voice for Conversations	Public price not established	Business-oriented launch; real-time speech translation for meetings and in-person conversations	14
2024-11 to 2025-07	Voice	Standalone Voice for Conversations via Sales, and Voice for Meetings Business sold directly	Standalone pricing sales-led / not public	Conversations plan via Sales; Conversations included in Voice for Meetings Business	31

Current snapshot

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2026-07	Translator web pricing	Individual / Team / Business	Search-indexed web snippet shows \$8.74 annual-billing start for Individual; Team and Business appear in current snippets, with Business pricing also cited in indexed results at \$57.49	Current web page also surfaces add-ons separately	45
2026-07	Write web pricing	Write Pro add-on	\$7.49 per user/month (billed annually)	Explicit add-on language on current public snippet	46

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2026-07	Translator naming crosswalk	Starter / Individual and Advanced / Team shown side by side in help tables	—	Lower tiers have daily add-in character caps; higher tiers no limit	47
2026-07	Voice mobile IAP	Voice Starter / Voice Business	Germany App Store: €14.00 monthly / €143.99 annual for Voice Starter; €42.00 monthly / €429.99 annual for Voice Business	Confirms self-serve mobile purchases and recurring plan names	21
2026-07	API current	Developer API / Growth API / Enterprise API	Pricing not fully exposed in accessible primary text here; PricingSaaS lists Growth \$26/month as current tracked price	Growth includes 50M chars + 300 speech-to-text hours monthly; API Free and API Pro no longer purchasable	48

Current visible feature gates

Feature or limit	What the public evidence shows	Source
File size and per-document character limits	Starter: 10 MB / 100,000 chars for Word and PPT; Advanced: 20 MB / 1M chars ; Ultimate/Business larger; current tables also show Team/Business/API limits	49
Microsoft add-in daily limits	Starter/Individual: Translator 3,000 chars/day, Write 2,000 ; Advanced/Team the same; Ultimate and Business no translator limit; DeepL Write Pro no Write limit	47
SSO threshold	Available for qualifying team subscriptions with 50+ users	50
Glossary gating	Starter/Individual store glossaries at account level; Advanced/Ultimate/Team/Business/Enterprise support broader creation and uploads	51
Network access restrictions	Currently limited to Ultimate, Business, Enterprise	52

Feature or limit	What the public evidence shows	Source
Voice quotas	Starter: 300 mins/user/month , 50 online participants, 10 in-person group participants; Business: 600 mins/user/month , 300 online participants, 30 in-person group participants	53

Pricing-page structure evolution

What the page looked like before Write and Voice changed the surface

At the start of 2023, the public commercial surface appears to have been relatively simple: a **single DeepL Pro page** centered on Translator plans, with three paid tiers and a free comparison point, plus a separate API commercial path. Contemporary public articles quoting the page all describe the pricing discussion in terms of **Starter / Advanced / Ultimate** and document-translation allowances, which is the pattern you would expect from one combined Translator grid rather than a modern multi-product stack. 7

I was able to identify one exact archived Wayback URL for the English Pro page, **2023-10-25 10:09:00 UTC**, proving that **/en/pro** was a canonical archived pricing endpoint by late 2023. I could not directly inspect the content of that archived capture in this environment, so I cannot responsibly claim more than that without overreaching. 9

When bundles appear and when add-ons take over

The public record makes the bundle-to-add-on transition visible, but not perfectly dateable from accessible archive pages.

The strongest current proof of the **add-on** phase is explicit. DeepL's current help center says **"The Write Pro add-on can be added to any Translator plan that does not already include it,"** and the indexed pricing snippet for the current page reads **"Get more out of DeepL with an add-on... Write Pro add-on. \$7.49 per user/month (billed annually)."** That is unmistakably an add-on framing, not a bundle-first framing. 28

At the same time, present-day customer-facing channels still preserve evidence of the prior **bundle** era. DeepL's app-store help page lists **"Individual + Write Pro"** as a sellable in-app plan. The app-store listing itself also shows **"Individual + Write"** as a distinct in-app purchase, not merely "Individual plus optional add-on selected later." That means the market-facing packaging has not been perfectly uniform across channels even in 2026: web now presents Write as an add-on, while mobile app stores still present at least one bundled SKU. 54

Because I could not directly inspect a quarterly run of Wayback captures, the first public appearance of web bundles such as **"DeepL Pro Advanced + Write Pro"** and the exact date they disappeared cannot be stated confidently here. The most defensible reconstruction is: **free standalone Write in 2023 → paid Write Pro launch in April 2024 → a period with explicit bundled Write SKUs → current web add-on presentation by July 2026.** 55

When Voice starts showing up as a priced plan family

Voice followed a similar pattern of staged commercialization. At launch in November 2024, it was a new business product family rather than a mature self-serve pricing category. Current support pages still show part of that original structure: **Voice for Conversations** can be bought as a standalone sales-led plan, and it is also included inside **Voice for Meetings Business**. ⁵⁶

By the current period, Voice is clearly more formalized as a plan family on public channels. Help articles use a wider vocabulary of plans—**Voice for Meetings, Voice for Meetings Core, Voice for Meetings Business, Voice starter, Voice Business**—and mobile app stores sell **Voice Starter** and **Voice Business** directly. That is strong evidence that Voice moved from “new enterprise product” to a more public, SKU-based monetization model. ⁵⁷

The cumulative tier pattern and feature-comparison table

I could not directly verify, from archived HTML, the first date when DeepL’s pricing page adopted an explicit **“Everything in [previous plan], plus:”** cumulative tier narrative. Current searchable snippets do not expose that exact phrase, and the directly parsed current page is mostly navigation rather than the rendered pricing grid. So the first appearance of the cumulative-copy pattern remains **not established** in this session. ⁵⁸

What is visible instead is the **functional** cumulative logic preserved across DeepL’s help materials. The current help tables neatly ladder file limits, admin/security gates, and integration privileges across legacy and current plans. That suggests the comparison-table logic remained cumulative even if the exact on-page copy changed. Before the modern platform phase, the public differentiation looked heavily centered on document counts and usage limits. In the modern phase, the visible feature comparison broadens to include **Write, Voice, SSO, network access restrictions, style rules, customization**, and admin tools—consistent with DeepL’s shift from a translation utility to a broader language-workflow platform. ⁵⁹

Open questions and gaps

The largest unresolved gap is the one you explicitly cared about most: a quarter-by-quarter, directly inspected archive reconstruction of **deepl.com/pro, /pricing, /write**, and **/pro-api**. I could identify one exact Wayback capture URL for **/en/pro** on **2023-10-25**, but I could not fetch enough archived page bodies here to quote their grids directly. The source that would resolve this cleanly is a manual export of Wayback captures into dated screenshots or HTML for at least quarterly checkpoints across 2023, 2024, 2025, and 2026. ⁹

The second major gap is the **exact web date** when Translator naming changed from **Starter / Advanced / Ultimate** to **Individual / Team / Business**. DeepL’s own current help articles clearly bridge the naming systems, and current pricing snippets foreground the new names, but the precise public cutover date is not directly established in the sources I could inspect. A Wayback comparison of the public pricing page would resolve this immediately. ⁶⁰

The third gap is the exact interval in which **Write Pro bundles** on the web shifted to a generic **Write Pro add-on** model. Current sources prove both states existed. What is missing is a directly inspected archived

page showing the exact moment the public page changed from named combined SKUs to an add-on block. Again, Wayback captures of **/pro** or **/pricing** would resolve it. ⁶¹

The fourth gap is the exact public switch date from **API Free / API Pro** to **Developer / Growth / Enterprise API**. The change is real and evident in current help documentation and later pricing trackers, but this session could only bound it broadly rather than pin it to a month. The best resolving source would be archived snapshots of whichever public API pricing page DeepL used before and after the migration, or a dated DeepL changelog/help-center revision history for the API pricing article. ⁴⁸

The fifth gap is whether the current web pricing page itself publicly shows all Voice prices, or whether some Voice amounts are now only visible via app stores and logged-in or region-specific checkout flows. DeepL's help center says selected Voice plans are available via the pricing page, while app stores clearly expose concrete amounts for **Voice Starter** and **Voice Business**. Direct web-page capture would settle the channel split. ⁶²

Overall, the evidence is strong enough to reconstruct the main monetization story: **Translator-led DeepL Pro in 2023; Write added first as free, then as paid business writing, then bundled, then add-on; Voice launched as a business product in late 2024 and became a plan family by 2026; API broadened from Free/Pro translation to Developer/Growth/Enterprise covering translation, writing, and voice**. What remains incomplete is not the direction of change, but the exact month-by-month page choreography that only a full Wayback pass can prove. ⁶³
