DeepL - Pricing evolution

Simplifying pricing across four products

DeepL pricing started as one Translator grid. When Write Pro launched, that simple structure opened into standalone products plus bundles — three ways to buy, with the same Write Pro story repeated on every tier. I wrote the pricing content as the offer moved toward one page per product across Translator, Write, Voice and API, with cumulative tiers and add-ons.

This case follows that arc: what buying looked like when the catalog was small, where the language got tangled, and how the content settled into a clearer system.

My role	Worked with	Why it mattered
UX copywriter and content designer for pricing pages	Product marketing, design and product stakeholders	People needed to see which product they were buying, what each tier added and whether Write Pro was included or available as an add-on.

2023 · One product, one grid

At the start of 2023, DeepL pricing centered on Translator: Starter, Advanced and Ultimate in a single grid. API sat on its own path. Write was free. Pricing read as simple because the product family was simple — one commercial choice, described once.

2024 · A second product made buying complicated

When Write Pro launched, the public pricing page grew a three-tab selector: DeepL Translator, DeepL Translator + DeepL Write, and DeepL API. People could buy Translator alone, Write alone or a bundle — three routes to what was still one writing product. Each bundle tier carried the same Write Pro feature block. And “Pro” meant different things depending on which tab you were on.

The selector made the three buying routes explicit — and put the bundle on equal footing with the standalone products.

The same block, three times

Because Write Pro had no tiers of its own, every bundle card repeated the identical Write Pro group. Scanning the row meant reading the same four benefits again and again.

Identical Write Pro groups on Starter, Advanced and Ultimate bundles — repetition with no new information.

Even fact moved to

Every fact arrives in a sentence

Limits lived inside long bullets: file translations "per user / month in total," glossaries "with 5,000 entries each." The numbers were there, but they were hard to compare across cards.

DeepL Pro Advanced

✓

Maximum data security

✓

Unlimited text translation

✓

20 editable file translations per user / month in total

✓

Upload files up to 20 MB in size

✓

2,000 shared team glossaries with 5,000 entries each

✓

Team administration

✓

Single sign-on (SSO)

✓

CAT tool integration

Period bullets wrapped every limit in a full phrase, so the numbers never lined up cleanly.

2024–2025 · Folding the choice into the page

As Voice arrived, the direction shifted: stop sending people through tabs to buy Write. Keep one Translator page and let Write Pro become a toggle — add it or leave it — instead of a separate bundle grid.

Write Pro added

Add DeepL Write Pro

Translator only

Add DeepL Write Pro

One control replaces the bundle tab: Write Pro is present or not, on the same Translator page.

Write Pro added

Fast, accurate, and secure translations

Translator

Write Pro

Translator

Translator only

Fast, accurate, and secure translations

Translator

Translator

One Translator page serves both states — Write Pro added or Translator only — without a separate bundle route.

Discounts live with the price

Savings belong next to the number someone pays, not buried in the feature list. The badge sits beside the price so the commercial claim stays with the commercial fact.

Values repeat the label

2 Translators		4 Translators		8 Translators		16 Translators	
Translator licenses	2	4	4	8	8	16	16
Team members	2	4	4	8	8	16	16

20 Translators		40 Translators		80 Translators		160 Translators	
Translator licenses	20	40	40	80	80	160	160
Team members	20	40	40	80	80	160	160

Labels own the qualifiers

2 Translators		4 Translators		8 Translators		16 Translators	
Translator licenses	2	4	4	8	8	16	16
Team members	2	4	4	8	8	16	16

20 Translators		40 Translators		80 Translators		160 Translators	
Translator licenses	20	40	40	80	80	160	160
Team members	20	40	40	80	80	160	160

Qualifiers move into the row label so each cell states the value once — no bold noise, no repeated units.

The system · One page per product, cumulative tiers

The settled pattern is a page for each product. Translator, Write and API describe tiers as additions — what you already have, plus what you gain. Write can attach as an add-on. Voice stays sales-led.

Each tier states only what it adds

Starter opens with "What's included." Advanced answers with "Everything in Starter, plus." The reader builds a picture instead of re-reading the same checklist.

Repeated Write Pro block

Basic Write Pro

Advanced Write Pro

Enterprise Write Pro

Cumulative tiers

Starter

Advanced

Repetition across bundle cards gives way to a single progression: each tier names only its delta.

Translator carries the clearest cumulative grid: four tiers, each building on the last.

Previous Next

Write stands alone as free, paid add-on and sales-led business — not as another Translator column.

Voice for Meetings and Voice for Conversations stay parallel use cases, each with a path to Sales — not forced into a tier ladder.

A pricing system people can scan

A reader can open one product page, see what each tier adds and understand whether Write is included or available beside Translator. Prices, discounts and actions stay with the price block; comparison tables state values once.

The catalog still has four products — but the content no longer asks someone to assemble the offer from three tabs and a repeated feature wall.
