Marketing/editorial option 2 - Report campaign

Extending one research report across several editorial formats

I repurposed the report into a marketing article and turned webinar material into HubSpot and Phrase customer stories.

My role

Marketing writer and editor across long-form report, blog and customer-story formats

Worked with

Content marketing, research, design, webinar producers and customer speakers

Why it mattered

Each format needed a distinct purpose while staying faithful to the same research.

01 - The campaign

Adapting one evidence base to several editorial formats

Research-led story

[View larger](#)

A focused section turns two survey figures into a readable trend story rather than presenting them as isolated data points.

02 - The problem

Each format needed a distinct purpose while staying faithful to the same research.

Publishing the report once would have left most of its useful material buried inside a single long-form asset. The editorial opportunity was to preserve the research while creating shorter routes into the subject.

Repurposing could not mean copying paragraphs between channels. The blog needed a faster argument; the webinar material needed to become self-contained customer stories; and the report still needed to read as one piece.

Constraint

The derivative pieces had to remain faithful to the same evidence while changing depth, pacing and entry point for readers with different levels of attention.

04 - The judgment

The decisions doing the work

01

Give each format one job

The report carries the full research narrative, the blog creates a concise entry point and the case studies show how localization work operates inside real companies.

02

Rebuild, rather than abridge

The blog reorganizes the strongest findings for a marketing reader instead of reproducing the report introduction and removing paragraphs.

03

Turn transcripts into structured stories

The HubSpot and Phrase material is edited into challenge, operating model and practical lesson—not left as webinar chronology.

04

Keep the evidence consistent

Definitions, survey scope and supporting figures stay aligned as the narrative changes shape across formats.

The trade-off: A single campaign message is easier to repeat, but it wastes the distinct strengths of a report, article and customer example. Consistency comes from the evidence—not identical prose.

05 · The repurposing

Customer evidence gives the research another route to relevance

HubSpot story

View larger

The HubSpot story converts a webinar contribution into a compact account of scale, workflow and localization operations.

Phrase story

View larger

The Phrase story complements the customer example with a platform view of quality, automation and human review.

06 · The outcome

What the work made possible

The work created a multi-format thought-leadership package from one research investment: a substantial report, a repurposed blog and webinar-derived case studies that could meet readers at different depths.
