

DeepL Product, Pricing, and Pricing-Page Evolution

Archive-revised edition - 23 July 2026

What can be established with confidence

From January 2023 through July 2026, DeepL’s public monetization evolved along four clear arcs.

First, the original **DeepL Pro** translator lineup at the start of 2023 was the familiar three-tier structure of **“Starter,” “Advanced,”** and **“Ultimate,”** plus a free tier and sales-led enterprise options. Contemporary public reporting that quoted DeepL’s page described annual per-user pricing at **€7.49 / €24.99 / €49.99** and document-translation limits of **5 / 20 / 100 files per month**, with the same per-user pricing used for team subscriptions. DeepL’s API remained separate, with **DeepL API Free** and **DeepL API Pro** sold on a usage model.

Second, **DeepL Write** launched as a free beta on **January 17, 2023**, then **DeepL Write Pro** launched on **April 25, 2024** as a business-grade paid writing assistant. Over time, Write moved from being introduced as its own product to being packaged in combinations with Translator and then, by the current public pricing structure, to an explicit **“Write Pro add-on”** attached to Translator plans. DeepL’s own help center now states that the current pricing page reflects a changed plan offering and that some earlier plans are no longer shown.

Third, **DeepL Voice** launched publicly on **November 13, 2024** with **Voice for Meetings** and **Voice for Conversations**, initially framed as new business products rather than a mature self-serve consumer plan family. By 2026, DeepL’s help center and mobile-app purchase documentation show a mixed model: some Voice plans are sold publicly as **“Voice Starter”** and **“Voice Business”** in app stores, while **Voice for Conversations** can still be bought as a standalone sales-led plan and is also bundled into **“Voice for Meetings Business.”**

Fourth, the public Translator ladder changed from **Starter / Advanced / Ultimate** to **Individual / Team / Business** after **June 4 and by July 21, 2025**. The same window introduced the cumulative **“Everything in ..., plus”** comparison copy. By late October 2025, the former Translator + Write bundle tab had become an explicit **Write Pro add-on**. For API, current help documentation shows that **API Free** and **API Pro** are legacy purchase paths, while the current lineup is **Developer API**, **Growth API**, and **Enterprise API**; however, the exact global cutover date remains unresolved. [June 4 pricing-page record](#), [July 21 pricing-page record](#), [October 29 pricing-page record](#)

The archive evidence is uneven but now materially stronger. Wayback preserved the **October 25, 2023** page shell but not its dynamically loaded plan grid. Arquivo.pt preserved June 2024 pricing code, while public urlscan page-content records preserved dated rendered text from 2025 and 2026. Those alternatives make it possible to bound the Translator rename, cumulative-copy redesign, and Write bundle-to-add-on transition. Locale, currency, account state, and experiment cohorts may still have produced staggered rollouts, so this report states bounded dates rather than claiming a single global launch instant. [Wayback capture](#), [Arquivo.pt capture](#)

Master chronological timeline

Date	Product	Event	Source
2023-01-17	DeepL Write	DeepL Write launches in beta as a free AI writing companion for English and German.	
2023-01	Translator pricing baseline	Public pricing quoted as Starter €7.49 , Advanced €24.99 , Ultimate €49.99 per month on annual billing; tiers differed mainly by document volume and unlimited use.	

Date	Product	Event	Source
2023-01	API baseline	DeepL API Free and DeepL API Pro are the public API offers; API Pro pricing was quoted as €4.99/month + €0.00002 per translated character .	
2023-10-25	Pricing page evidence	An exact Wayback capture URL for /en/pro exists for 2023-10-25 10:09:00 UTC ; this confirms /pro was an archived canonical pricing endpoint by late 2023.	
2024-04-24	DeepL Write	DeepL publishes a product overview for DeepL Write Pro , positioning it as a secure AI writing assistant for business communication.	
2024-04-25	DeepL Write	DeepL Write Pro officially launches with standalone and named Translator bundle offers. Japanese launch reporting lists standalone Write Pro at ¥2,250 monthly (¥1,500 annual equivalent) , Starter + Write Pro at ¥3,180 monthly (¥2,350 annual equivalent) , and Advanced + Write Pro at ¥5,850 monthly (¥4,650 annual equivalent) .	Impress Watch launch report ·
2024-06	Translator + Write	Archived pricing-page code defines Starter + Write , Advanced + Write , and Ultimate + Write plan types and a bundle view.	Archived page component · Archived shared pricing code
2024-05-22	Company / product context	DeepL raises \$300 million; company press says Write Pro had launched in April 2024.	
2024-07-17	Translator / API	DeepL announces its next-generation LLM for translation quality; later help docs show access to the next-generation model attached to paid API offerings.	
2024-11-13	DeepL Voice	DeepL Voice launches with Voice for Meetings and Voice for Conversations .	
2025-02-26	Pro experience	DeepL launches a new logged-in team/business Pro experience with redesigned navigation and admin tooling.	
2025-03-04	Translator / enterprise features	DeepL launches Clarify , an interactive translation feature positioned for business customers.	
2025-05-08	Pro experience	DeepL publishes a second article describing the newly redesigned Pro homepage , confirming the redesign had shipped.	
After 2025-06-04 and by 2025-07-21	Translator pricing	The public ladder changes from Starter / Advanced / Ultimate to Individual / Team / Business , and the page adopts cumulative “Everything in ..., plus” copy.	June 4 record · July 21 record
After 2025-10-09 and by 2025-10-29	Translator + Write	The DeepL Translator + DeepL Write tab disappears and the page begins promoting the Write Pro add-on .	October 9 record · October 29 record
2025-10-15	API packaging	A Polish DeepL pricing-page record still publicly lists API Free and API Pro . This disproves a confident November 2025 global cutover claim; the first Developer/Growth/Enterprise rollout date remains unresolved.	October 15 Polish API record ·
2026-04-16	Voice / API	DeepL launches Voice-to-Voice and publicly announces DeepL Voice API and speech-to-speech products.	

Date	Product	Event	Source
2026-04-22	Voice web pricing	A dated public page record places Voice for Meetings beside Translator and API in the pricing selector. The hidden Voice plan grid and historical web prices remain unrecovered.	April 22 pricing-page record
2026-07	Current public web pricing	Indexed snippets show current Translator pricing-page names as Individual , Team , and Business , with Write Pro add-on sold separately.	
2026-07	Current public app-store pricing	DeepL's Germany App Store listing shows in-app purchases for Individual , Individual + Write , Voice Starter , and Voice Business , which confirms active self-serve mobile sales for those bundles.	

Product-line evolution

Translator subscriptions

At the start of 2023, DeepL's paid translator product was publicly organized under **DeepL Pro** with three named tiers: **"Starter," "Advanced," and "Ultimate."** Public reporting in January and February 2023 quoted annual-billing prices of **€7.49**, **€24.99**, and **€49.99** respectively, and described their main visible differences as unlimited-use privileges and the monthly number of document translations included. The same articles describe the free tier as allowing only a small number of document translations, and they say team accounts used the same per-user pricing.

DeepL's current help-center tables make the old-to-new renaming visible. File-limit and Microsoft add-in documentation now list the old and new names side by side as **"Starter / Individual," "DeepL Pro Advanced / Team,"** and then **"DeepL Pro Ultimate," "DeepL Pro Business,"** which strongly suggests an intermediate migration path rather than an overnight total rewrite of plan taxonomy. Those same tables preserve important gating details: document size limits differ sharply by tier, and add-ins keep daily character caps for lower tiers while higher tiers remain uncapped.

By the current public web pricing surface, DeepL's indexed pricing snippet shows Translator sold as **"Individual," "Team," and "Business."** The same current snippet still behaves like the old ladder in substance: the plan comparison surfaced in search results explicitly references the free version, then **Individual**, then **Team**, and the help docs continue to expose tier-based gating around glossary behavior, MSI install rights, network restrictions, and SSO support.

Several feature gates are visible in DeepL's own support material. Glossary storage for **Starter / Individual** is personal-account based, while **Advanced / Team / Ultimate / Business / Enterprise** support broader glossary management. **SSO** is available only for team subscriptions with **50+ users**, and only on qualifying plans such as **DeepL Pro Advanced, Team, Ultimate, Business, Enterprise**, plus some Write and Voice team plans. **Network access restrictions** are currently limited to **Ultimate, Business, and Enterprise**.

Direct pricing-page records now bound the renaming. On **June 4, 2025**, the page still led with **Starter / Advanced / Ultimate**. By **July 21, 2025**, it led with **Individual / Team / Business** at the same euro prices and used the cumulative copy **"Everything in Free, plus," "Everything in Individual, plus,"** and **"Everything in Team, plus."** The public pricing-page transition therefore occurred after June 4 and no later than July 21, 2025. [June 4 pricing-page record](#), [July 21 pricing-page record](#)

DeepL Write

DeepL Write first appears on **January 17, 2023** as a free beta product, launched publicly in English and German. DeepL's own launch post is clear that Write began as a separate AI writing tool, not as a paid Translator feature: it was introduced as a newly minted AI writing companion, free for anyone to use at launch. TechCrunch's same-day

coverage confirms the launch date and the product's positioning as DeepL expanding from translation into writing assistance.

DeepL Write Pro launched on **April 25, 2024**. DeepL's press release and blog positioning both frame it as a business-grade writing assistant with stronger security and real-time suggestions for wording, style, and tone. That launch matters monetization-wise because it marks the shift from Write as a free standalone tool into Write as a sellable premium product.

The packaging moved through three directly supported phases. The first phase was **standalone free Write**. The second began with the April 2024 Write Pro launch and included standalone and named Translator bundle offers. Japanese launch reporting lists standalone Write Pro at **¥2,250 monthly (¥1,500 monthly equivalent on annual billing)**, **Starter + Write Pro** at **¥3,180 monthly (¥2,350 annual equivalent)**, and **Advanced + Write Pro** at **¥5,850 monthly (¥4,650 annual equivalent)**. Archived June 2024 pricing code independently defines **Starter + Write**, **Advanced + Write**, and **Ultimate + Write** plan types and a bundle view. [Impress Watch launch report](#), [archived page component](#), [archived shared pricing code](#)

The third phase is the add-on treatment. On **October 9, 2025**, the page still exposed separate tabs for **DeepL Translator**, **DeepL Translator + DeepL Write**, and **DeepL API**. By **October 29, 2025**, the bundle tab had disappeared and the page promoted **"Enhance your writing with the Write Pro add-on."** The web transition therefore occurred after October 9 and no later than October 29, 2025. Current help and pricing material confirms the resulting model: Write Pro can be added to qualifying Translator plans. [October 9 pricing-page record](#), [October 29 pricing-page record](#)

The evidence does not identify the exact day inside either rollout window, and mobile in-app bundles remain channel-specific evidence. Those limits do not weaken the narrower findings that named bundles existed at launch and that the public web page moved from a bundle tab to an add-on presentation between October 9 and October 29, 2025.

DeepL Voice

DeepL's voice line formally launched on **November 13, 2024**, when DeepL announced **DeepL Voice** and its first two products: **Voice for Meetings** and **Voice for Conversations**. DeepL's press release is the primary source for that date, and TechCrunch independently covered it the same day. The product at that point was speech-to-text translation in real time, aimed at multilingual meetings and in-person conversations.

The launch-era sales model appears to have been business-oriented, not broad self-serve consumer pricing. Current DeepL help pages still show a partially sales-led shape: **Voice for Conversations** can be bought as a **stand-alone plan via Sales**, or accessed as part of **"DeepL Voice for Meetings Business."** DeepL's general plans page likewise says that standalone **Voice for Conversations** is available via Sales, while **Voice for Meetings Business** is available directly via the pricing page. That strongly implies an initial enterprise or sales-assisted phase, followed by a later move toward selective self-serve availability.

By the current period, the public naming has broadened. Help articles for Voice now list required plans including **"Voice for Meetings," "Voice for Meetings Core," "Voice for Meetings Business," "Voice starter,"** and **"Voice Business."** DeepL's consumer-facing app-store documentation also says the mobile apps sell **"Voice Starter"** and **"Voice Business."** In Germany's App Store listing, those currently appear as in-app purchases at **€14.00 monthly / €143.99 annual for Voice Starter** and **€42.00 monthly / €429.99 annual for Voice Business**. Because those are app-store prices, they should be treated as mobile-IAP channel pricing, not automatically assumed to be identical to the web page.

DeepL's legal terms now expose important gating details for the current Voice family. The terms describe **Starter** as including **300 minutes per month per user, 50 online participants, and up to 10 participants for in-person group conversations**; **Business** includes **600 minutes per month per user, 300 online participants, and up to 30 participants for in-person group conversations**. Help documentation for Voice for Meetings separately confirms support for **Microsoft Teams, Google Meet, and Zoom**, and up to **300 participants** seeing translated captions.

In **April 2026**, DeepL expanded the voice stack again with **Voice-to-Voice** and **Voice API**, moving beyond captioned speech translation into speech-to-speech and embedded enterprise workflows. A dated pricing-page record from **April 22, 2026** also places **Voice for Meetings** beside Translator and API in the plan selector, directly establishing its web-pricing-page presence by that date. The hidden Voice grid was not recovered, so its historical web prices remain unestablished. [April 22 pricing-page record](#)

DeepL API

In early 2023, the public API lineup was still the familiar **DeepL API Free** and **DeepL API Pro** structure. DeepL's Microsoft connector documentation, which reproduced DeepL's own FAQ language, described **API Pro** as costing **€4.99 per month plus €0.00002 per translated character**, with **API Free** allowing up to **500,000 characters per month for free**. This is consistent with third-party developer documentation and 2023 ecosystem articles quoting DeepL's help center.

Current DeepL help documentation shows that this packaging materially changed. The current API article says the API is now sold through **Developer API**, **Growth API**, and **Enterprise API**, while **API Free** and **API Pro** "can no longer be purchased." It also describes the new plan logic in detail: **Developer API** allows **1,000,000 characters in total**; **Growth API** includes a **fixed monthly or yearly price** with included usage, **50 million characters and 300 speech-to-text hours per month**, and charges overages above the included quota; **Enterprise API** is sales-led and based on committed usage.

The current help article also shows how DeepL's API monetization became more product-complete over time. Legacy **API Pro** now includes, in retrospective description, not just translation, but also **DeepL API for Write, speech-to-text translation**, access to the **next-generation language model**, and multiple admin/API-key management features. The same article says **Growth API** includes access to Write, speech-to-text, next-generation model access, and cost-control tooling. That is a meaningful expansion from the 2023-era translation-first API packaging.

The exact transition from **API Free / API Pro** to **Developer / Growth / Enterprise** is not yet reconstructable. The report must not use PricingSaaS's tracking start as proof of a November 2025 public cutover: its current company page is not a dated November snapshot. A directly inspectable Polish DeepL pricing-page record still sold **API Free** and **API Pro** on **October 15, 2025**. Current DeepL help confirms the later lineup and says the legacy plans can no longer be purchased. The first date and channel for the new packaging remain unresolved. [October 15 Polish API record](#), [current DeepL API plans](#)

Other launches that affected packaging

The biggest non-price packaging change in the period is DeepL's move toward featureized, business-grade upsells layered on top of core translation. In **July 2024**, DeepL announced a **next-generation LLM** for translation quality. In present-day support copy, access to the "next-generation language model" is tied to paid API tiers, showing how a model release became part of plan differentiation rather than just a silent backend improvement.

In **March 2025**, DeepL launched **Clarify**, which it described as a new interactive feature for business translations. DeepL's press copy framed it as personalization for the Language AI platform and as a response to demand from business customers. That matters for monetization because it reflects the company's shift toward value-added business controls and workflow features rather than only raw translation volume.

By **2026**, DeepL was also publicly marketing **AI agents** and **Translation Flow** within the broader platform navigation and product messaging. These are not yet reconstructed here as clean public price lines in the same way as Translator, Write, Voice, and API, but they clearly affect how the pricing page is framed: the page is no longer just "buy translation volume," but "buy access to a larger language-workflow platform."

Pricing snapshot tables

The tables below are not “every archived quarter” in the ideal Wayback sense; instead, they are the strongest dated public evidence points I could verify from accessible sources. Where a price or structural element could not be read directly, I mark it **not established** rather than inferring it.

Baseline snapshot at the start of 2023

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2023-01 to 2023-02	Translator	Starter / Advanced / Ultimate ; free tier; team accounts; enterprise by sales	Starter €7.49, Advanced €24.99, Ultimate €49.99 per month on annual billing	5 / 20 / 100 document translations per month; teams on same per-user price; free only a few documents	
2023-01 to 2023-02	API	DeepL API Free / DeepL API Pro	API Pro €4.99/month + €0.00002 per character	API Free up to 500,000 characters/month	
2023-01	Write	DeepL Write beta, free	Free	Separate writing tool, not yet a paid add-on	
2023-01	Voice	Not yet launched	-	-	

Snapshot around Write Pro launch

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2024-04-25	Write	DeepL Write Pro launches as standalone and named Translator bundle offers	Standalone ¥2,250/month (¥1,500 annual equivalent)	Business-grade writing assistant; launch reporting also prices Starter + Write and Advanced + Write	Impress Watch ·
2024-06	Translator + Write	Archived pricing code defines Starter / Advanced / Ultimate + Write plan types	Locale-specific prices; not generalized beyond dated evidence	Bundle view encoded in the web pricing experience	Archived page component · shared pricing code
2024-05	Company context	DeepL PR references Write Pro as a launched product	-	Confirms Write has become part of monetized business platform	

Snapshot around Voice launch

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2024-11-13	Voice	Voice for Meetings / Voice for Conversations	Public price not established	Business-oriented launch; real-time speech translation for meetings and in-person conversations	
2024-11 to 2025-07	Voice	Standalone Voice for Conversations via Sales, and Voice for Meetings Business sold directly	Standalone pricing sales-led / not public	Conversations plan via Sales; Conversations included in Voice for Meetings Business	

Current snapshot

Date	Product line	Public lineup visible from dated evidence	Public prices visible	Key limits or structure visible	Source
2026-07	Translator web pricing	Individual / Team / Business	Search-indexed web snippet shows \$8.74 annual-billing start for Individual; Team and Business appear in current snippets, with Business pricing also cited in indexed results at \$57.49	Current web page also surfaces add-ons separately	
2026-07	Write web pricing	Write Pro add-on	\$7.49 per user/month (billed annually)	Explicit add-on language on current public snippet	
2026-07	Translator naming crosswalk	Starter / Individual and Advanced / Team shown side by side in help tables	-	Lower tiers have daily add-in character caps; higher tiers no limit	
2026-04-22	Voice web pricing	Voice for Meetings appears as a pricing selector tab	Complete web grid and historical web prices not recovered	Directly establishes web-pricing-page presence; mobile IAP remains channel-specific	April 22 pricing-page record
2026-07	Voice mobile IAP	Voice Starter / Voice Business	Germany App Store: €14.00 monthly / €143.99 annual for Voice Starter; €42.00 monthly / €429.99 annual for Voice Business	Confirms self-serve mobile purchases and recurring plan names	
Current; historical cutover unresolved	API	Developer API / Growth API / Enterprise API ; legacy Free / Pro unavailable now	Current Growth price evidence only	API Free / API Pro remained public in the Polish channel on 2025-10-15	October 15 Polish API record

Current visible feature gates

Feature or limit	What the public evidence shows	Source
File size and per-document character limits	Starter: 10 MB / 100,000 chars for Word and PPT; Advanced: 20 MB / 1M chars ; Ultimate/Business larger; current tables also show Team/Business/API limits	
Microsoft add-in daily limits	Starter/Individual: Translator 3,000 chars/day, Write 2,000 ; Advanced/Team the same; Ultimate and Business no translator limit; DeepL Write Pro no Write limit	
SSO threshold	Available for qualifying team subscriptions with 50+ users	
Glossary gating	Starter/Individual store glossaries at account level; Advanced/Ultime/Team/Business/Enterprise support broader creation and uploads	
Network access restrictions	Currently limited to Ultimate, Business, Enterprise	
Voice quotas	Starter: 300 mins/user/month , 50 online participants, 10 in-person group participants; Business: 600 mins/user/month , 300 online participants, 30 in-person group participants	

Pricing-page structure evolution

What the page looked like before Write and Voice changed the surface

At the start of 2023, the public commercial surface appears to have been relatively simple: a **single DeepL Pro page** centered on Translator plans, with three paid tiers and a free comparison point, plus a separate API commercial path. Contemporary public articles quoting the page all describe the pricing discussion in terms of **Starter / Advanced / Ultimate** and document-translation allowances, which is the pattern you would expect from one combined Translator grid rather than a modern multi-product stack.

The exact Wayback capture for **2023-10-25 10:09:00 UTC** confirms that **/en/pro** was a canonical archived pricing endpoint and preserves the page shell, including “Find your perfect plan.” It does not preserve the dynamically loaded grid. Arquivo.pt and public urlscan records therefore provide the plan-level evidence used for the later dated findings. [Wayback capture](#), [Arquivo.pt capture](#)

When bundles appear and when add-ons take over

The public record now bounds both the launch-era bundle phase and the later bundle-to-add-on transition.

The strongest current proof of the **add-on** phase is explicit. DeepL’s current help center says “**The Write Pro add-on can be added to any Translator plan that does not already include it,**” and the indexed pricing snippet for the current page reads “**Get more out of DeepL with an add-on... Write Pro add-on. \$7.49 per user/month (billed annually).**” That is unmistakably an add-on framing, not a bundle-first framing.

At the same time, present-day customer-facing channels still preserve evidence of the prior **bundle** era. DeepL’s app-store help page lists “**Individual + Write Pro**” as a sellable in-app plan. The app-store listing itself also shows “**Individual + Write**” as a distinct in-app purchase, not merely “Individual plus optional add-on selected later.” That means the market-facing packaging has not been perfectly uniform across channels even in 2026: web now presents Write as an add-on, while mobile app stores still present at least one bundled SKU.

Launch reporting establishes named Translator + Write bundles on **April 25, 2024**, and archived June 2024 code confirms those plan types in the pricing experience. The bundle tab remained visible on **October 9, 2025** and had become an add-on treatment by **October 29, 2025**. The exact day within that October window remains unestablished, but the web transition itself is now directly bounded. [Impress Watch launch report](#), [October 9 record](#), [October 29 record](#)

When Voice starts showing up as a priced plan family

Voice followed a similar pattern of staged commercialization. At launch in November 2024, it was a new business product family rather than a mature self-serve pricing category. Current support pages still show part of that original structure: **Voice for Conversations** can be bought as a standalone sales-led plan, and it is also included inside **Voice for Meetings Business**.

By the current period, Voice is clearly more formalized as a plan family on public channels. Help articles use a wider vocabulary of plans-**Voice for Meetings, Voice for Meetings Core, Voice for Meetings Business, Voice starter, Voice Business**-and mobile app stores sell **Voice Starter** and **Voice Business** directly. That is strong evidence that Voice moved from “new enterprise product” to a more public, SKU-based monetization model.

A dated pricing-page record places **Voice for Meetings** beside Translator and API in the web pricing selector by **April 22, 2026**. This establishes direct web-pricing-page presence, but the hidden Voice plan grid was not recovered; app-store amounts must therefore remain separate channel evidence rather than substitutes for web prices. [April 22 pricing-page record](#)

The cumulative tier pattern and feature-comparison table

The cumulative-copy transition can now be bounded to the same window as the Translator rename. The **June 4, 2025** record presents Starter, Advanced, and Ultimate with their own feature lists. The **July 21, 2025** record uses **“Everything in Free, plus,” “Everything in Individual, plus,”** and **“Everything in Team, plus.”** The first appearance therefore occurred after June 4 and by July 21, 2025. [June 4 pricing-page record](#), [July 21 pricing-page record](#)

What is visible instead is the **functional** cumulative logic preserved across DeepL’s help materials. The current help tables neatly ladder file limits, admin/security gates, and integration privileges across legacy and current plans. That suggests the comparison-table logic remained cumulative even if the exact on-page copy changed. Before the modern platform phase, the public differentiation looked heavily centered on document counts and usage limits. In the modern phase, the visible feature comparison broadens to include **Write, Voice, SSO, network access restrictions, style rules, customization**, and admin tools-consistent with DeepL’s shift from a translation utility to a broader language-workflow platform.

Open questions and gaps

The archive pass resolves the largest structural gaps without pretending to produce a complete quarter-by-quarter reconstruction. Wayback preserves the **October 25, 2023** page shell but not its dynamic plan grid. Arquivo.pt recovers June 2024 bundle code, and public urlscan page-content records recover decisive 2025 and 2026 page states. A full quarterly series across **/pro**, **/pricing**, **/write**, and **/pro-api** remains incomplete. [Wayback capture](#), [Arquivo.pt capture](#)

The exact day when Translator naming and cumulative copy changed remains unresolved, but the interval is now narrow: **after June 4 and by July 21, 2025**. The same caveat applies to the Write presentation: the exact day is unknown, but the bundle tab became an add-on treatment **after October 9 and by October 29, 2025**. [June 4 record](#), [July 21 record](#), [October 9 record](#), [October 29 record](#)

The largest remaining commercial gap is the first date and channel for the switch from **API Free / API Pro to Developer / Growth / Enterprise API**. The new structure is current, but a Polish public pricing record still offered the legacy plans on **October 15, 2025**. The previous November 2025 claim is therefore removed. A dated English pricing capture, locale-by-locale rollout evidence, or DeepL help-center revision history would resolve the cutover. [October 15 Polish API record](#), [current DeepL API plans](#)

The remaining Voice gap is narrower as well. **Voice for Meetings** is directly present in the web pricing selector by **April 22, 2026**, but the archived record does not expose its hidden plan grid. It remains unknown whether all Voice amounts were public on the web or whether some were limited to app stores, logged-in checkout, region-specific flows, or sales. [April 22 pricing-page record](#)

Overall, the evidence is strong enough to reconstruct the main monetization story and several page-level transitions: **Translator-led DeepL Pro in 2023; Write added first as free, then as paid business writing with named bundles in April 2024; Translator renamed and adopted cumulative comparison copy by July 2025; Write shifted from a bundle tab to an add-on by late October 2025; Voice launched as a business product in late 2024 and appeared in the web pricing selector by April 2026; API broadened from Free/Pro to Developer/Growth/Enterprise, although that cutover date remains unresolved.**
